

# Arabica

Known as one of the most popular and well known types of coffee bean, Arabica beans are the most commonly produced variety and are considered higher quality beans. In fact, over 60% of the coffee beans in the world that are produced are Arabica variety.

These beans are grown at high altitudes and need to be in an area that has a steady rainfall and plenty of shade.

Perhaps one of the reasons that this is a variety of coffee bean that is seen the world over is because the trees are easy to care for, they are reasonably small and they are easy to prune too. Although they are delicate and can be affected by their environment. Arabica is both full of flavour and aroma, which is why it's our offering for our [coffee subscription UK](#) plan!

flavor -> flavour 영국 영어

be verb = '='

- arabica beans are very popular coffee beans world wide. The reason is not **mentioned/stated**.
- This is grow at high altitude and steady rainfall.
- This grows at high altitude and needs steady rainfall.
- The important thing about arabica beans are environment
- prune / bloom

## Robusta

The next variety of coffee bean is Robusta, which is the second most produced in the world.

robusta = robust

As the name hints, the Robusta bean is both hardy and is also immune to a variety of diseases too.

This type of coffee bean grows best in a hot climate with irregular rainfall and can grow at a number of altitudes too. Compared to Arabica beans, those that grow on the Robusta plant have double the amount of caffeine in them, meaning that they are an excellent choice for a real boost and offer a more harsh flavour.

The beans also have a smooth texture and it is often said that they even have a slight chocolate hint to them, which makes them ideal to have with milk and sugar (perhaps as an iced coffee).

## Liberica

One of the hardest types of coffee bean to come by is the Liberica bean. They are larger than the other beans and is the only one in the world that is known to have an irregular shape.

Liberica beans are also unique in their aroma and some say that they are not only smoky, but they are fruity and floral too.

## Excelsa

Although having recently been classified as a member of the Liberica family, the Excelsa bean is vastly different in taste when compared to the Liberica coffee bean.

So there you have it, a full run-through of the main types of coffee. You can check out our range of [coffees](#), [coffee gifts](#), [coffee equipment](#) and more in our [online shop](#).

Mostly found in the South East of Asia, it accounts for only around 7% of the worlds coffee.

what type of coffee do you like sour to bitter?

- I like bitter
- I don't like food being sour.
- except for soju

When I go to the cafe, I order de caffeine coffee and I can't explain how that taste

worth it ->

I hate because it sticks to my teeth.

stink

latte get to first drink

I usually drink ice vanilla latte

enough

because it has enough sugar and bitter.

do you think coffee goes well along with the milk?

go along with -> 사물 동물 풍경

look good together.

look good on

why

because ice vanilla latte is coffee mixed with milk so I think they go along well together?
